

Competence in Solids

FlowJam A

Material flow monitoring
for hose lines

Use

FlowJam A is a sensor which has been specially developed for monitoring the flow of solids conveyed by hose lines. The system can be applied to hose lines made of non-conducting materials such as plastic or rubber with external diameters of between 2 and 10 mm. The hose line is inserted into the sensor for measuring.

Function

FlowJam A detects streams of solids of all types flowing at a minimum speed of 0.1 m/s through the detection area.

The detection is independent of the direction of flow through the Doppler effect evaluation system.

The flow of material through non-metallic pipelines is displayed by two switching states on the output relay.

The sensor differentiates between the two switching states:

- Material flow
- Material blockage or standstill.

System

A complete measuring device consists of the sensor and a transmitter which powers the sensor and provides a switch output.

The control elements for the start-up procedure are found on the FlowJam A's DIN rail electronics. Both the switching sensitivity and the response delay can be set.

Applications - practical examples

■ Powder coating

When coating components or devices with powder coating, it is always difficult to ensure a constant emission of powder coating from the spray nozzles.

Failures in the conveying system often go undetected and can have a negative impact on the coating finish.

FlowJam A can constantly monitor the stream of powder coating and immediately indicate any failures.

■ Blasting plants

To process surfaces, blasting media such as glass beads, ceramics, shell granulates or corundum are pneumatically blasted at high speed onto the surface. The constancy of the flow rate is important here too to ensure a good blast quality. FlowJam A can constantly monitor the stream of blasting media. Failures are rapidly detected with short response times.

Electrical connection

A 2-core cable is required to connect the sensor to the transmitter. The length must not exceed 300 m.

The sensor is equipped with an M12 connector (including a mating plug).

Sensor	
Power supply	12 V DC powered by transmitter
Connection	M12 connector
Power consumption	approx. 1.5 W
Housing	Aluminium
Protection system	IP 65
Process temperature	-20 ... +60 °C
Ambient temperature	-20 ... +60 °C
Required material speed	min. 0.1 m/s
Working frequency	K-Band 24,125 GHz; \pm 100 MHz
Transmitting power	max. 5 mW
Dimensions	Housing: L 122 mm / W 39 mm / H 44 mm
Weight	Approx. 190 g

DIN rail transmitter	
Power supply	24 V DC \pm 10 %
Power consumption	approx. 3.5 W
Relay output	
▪ Voltage	max. 110 V AC
▪ Current	max. 1 A
▪ Capacity	max. 60 W
Fall-delay time	1...15 s (continuously adjustable)
Weight	Approx. 172 g
